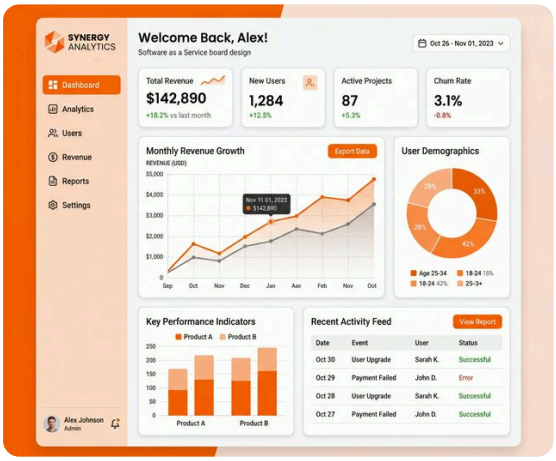
Summary

Yuvr's Invoicing Platform is built from the ground up to handle your entire proposal-to-payment lifecycle. The core concept revolves around simplicity without sacrificing power. It integrates client data, estimates, tax rules, and polished invoice generation seamlessly into one interface.

By centralizing your financials, you gain back hours of administrative time previously lost to manual data entry and cross-referencing disjointed systems.



Not all invoices are created equal.

A professional invoice reflects your brand's identity and reliability. We designed the engine to generate stunning pixel-perfect PDF documents dynamically based on your chosen layouts and color themes.

Workflow Architecture

The core flow of the Yuvr's Invoicing Platform is designed linearly to guide you safely from initial contact to paid invoice.

1

AUTHENTICATION

Instant signup using Supabase Auth. Enter details and bypass email to immediately access the dashboard.

2

CLIENT DATA

Input client name, regional tax rules, and email securely matched to your isolated RLS domain.

3

SETTINGS CONFIG

Select your base brand settings, including primary hex colors and custom typography.

4

ESTIMATES PHASE

Draft detailed estimates with dynamic line items. Clients view and accept locking in totals safely.

5

1-CLICK CONVERT

Translate approved estimate directly into a pending invoice. Zero data re-entry required.

6

INVOICE GENERATOR

Finalize the invoice, triggering PDF engine export and email features directly from the app.

Key modules

Live Dashboard Metrics

Monitors lifetime revenue and tracks pending invoices through beautiful metric cards.

Intelligent Tax Parsing

Automatically calculates VAT/GST logic depending on the registered client region.

Brand Continuity

Every element respects your custom uploaded logo and chosen brand CSS logic.

Core Concepts

Row Level Security

All invoice and client data is intensely partitioned directly at the database layer. No user can view another tenant's financial history.

Sequential Ledger

Invoice increments happen deterministically. A user's invoice count increases chronologically across all clients representing true business ledgers.

Invoice Output Mapping

When an invoice is fully modeled, the system utilizes this structure for rendering your final dispatched document to the end-client.

INTERNAL ID	DESCRIPTION MAPPING	VALUE RULE
inv_number	The sequential identifier (e.g., INV-2026-003)	Generated dynamically
line_items[]	Array of services rendered or goods sold	User entry loop
unit_price	The isolated cost per individual item entry	< decimal max 2
tax_allocation	Computed GST/VAT calculation of subtotal	% of active client
currency_iso	Standardized 3-letter currency code (USD, EUR)	Selector match

System Stability	99.9%
Invoice Fidelity	Perfect

These dynamic elements are automatically combined with your branding themes to compose the beautiful final documents sent securely to the clients' inboxes as pure, interactive PDFs.

Quick Start Guide

Follow these linear steps to jumpstart your billing pipeline instantly.

01 Configure Your Brand Layer

Navigate to the **Settings** panel. Upload your agency logo, select a primary brand color (e.g., Orange, Blue), and choose a typography style. Your generated PDFs will instantly inherit these overarching visual characteristics.

02 Insert Your First Client

Head to the **Clients** module. Input their business name, email, and specific tax requirements (like local GST/VAT logic). This isolates their data securely for future automated dropdown form fills.

03 Draft an Initial Estimate

Create an estimate proposal to send to your new client for approval. Once accepted, strictly utilize the 'Convert to Invoice' software trigger to instantly translate the proposal into a live billable invoice without any data reconstruction.

04 Dispatch the Final Invoice

Navigate to **Invoices**. Your client is already populated. Simply adjust the final services rendered (custom line items & quantities), and click 'Save'. Instantly export the document as a digital PDF or stream it to their e-mail directly from the platform.

Thank you for choosing us!
